

Requests for Adjustments and Improvements - 09/01/2026

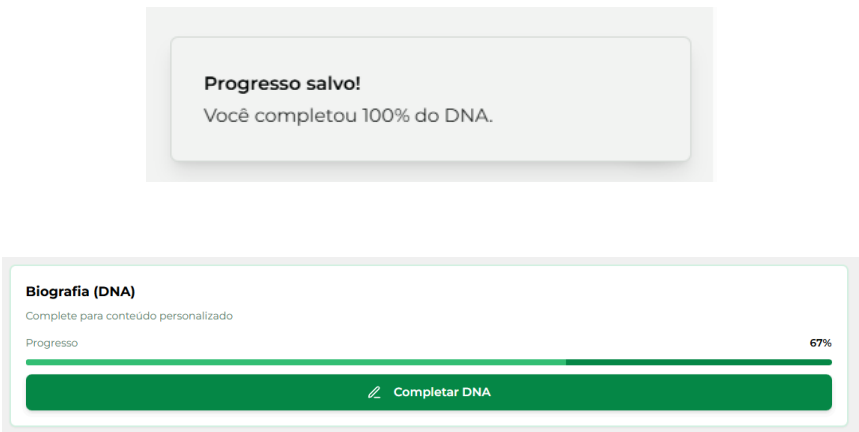

This document organizes the demands into two main sections: feedback on found bugs and requests for new features/adjustments.

Section 1: Bug Feedback (Current Version)

1.1. Error in Biography (DNA)

Problem: When editing the **Biografia (DNA)**, the completion message appears, but when returning to the dashboard, the status is not shown as complete.

Evidence:

1.2. Automatic Draft Saving

Problem: Currently, drafts are only saved when the user clicks the "Salvar Rascunho" button.

Requested Improvement: Implement automatic draft saving whenever the user:

- Leaves the input screen.
- Closes the window or browser tab.
- Navigates to another area of the system.

Objective: Avoid progress loss if the user exits accidentally or forgets to save manually.

1.3. Draft Deletion Confirmation

Problem: When deleting a draft on the dashboard, the action is executed immediately without prior confirmation, and only an "Undo" notification appears.

Requested Improvement:

1. **Confirmation Modal/Alert:** Before deleting, display a confirmation request (e.g., "Tem certeza que deseja excluir este rascunho?").
2. **Undo Notification:** Keep the "Desfazer" (Undo) option after confirmation and deletion as an extra security layer.

Objective: Prevent accidental deletion of important content.

1.4. Inconsistency in Renewal Status (Cancelled Plan)

Problem: Even after the user cancels the subscription (confirmed on the details screen), the main dashboard still displays the message "Renova em 06/02/2026", which confuses the user.

Evidence:

Correct State (Subscription Screen):

Incorrect State (Dashboard):

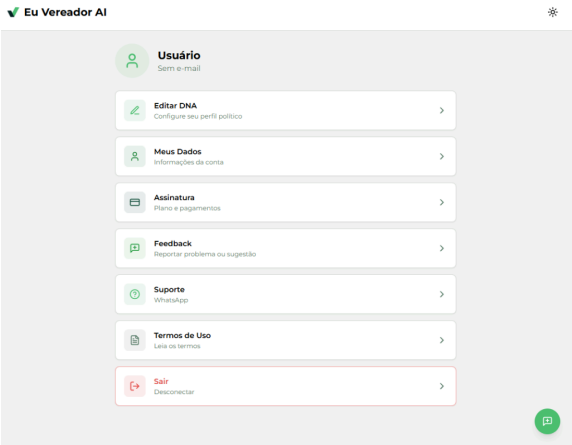

1.5. User Data Loading Delay (Profile Screen)

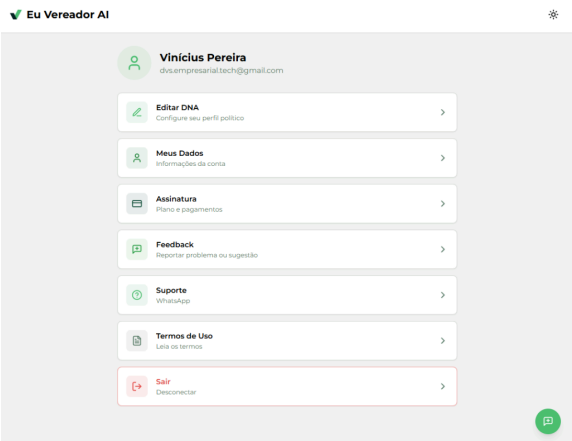

Problem: When accessing the Profile screen, the system initially displays a generic state ("Usuário" and "Sem e-mail") and takes a few moments to load the real user data.

Evidence:

Initial State (Loading):

Final State (Loaded):

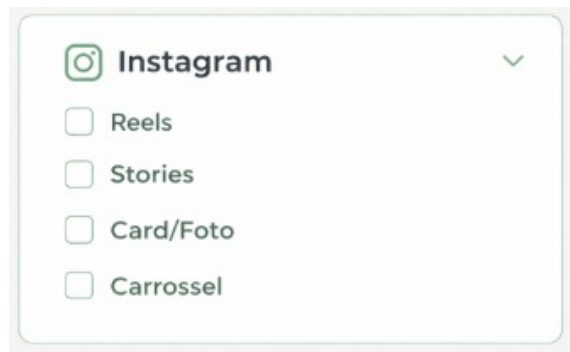

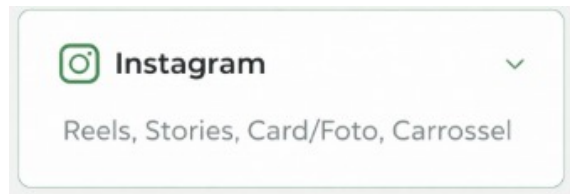

Section 2: Additions and Improvements (New Implementations)

2.1. Change in Channel System

Objective: Change the representation of channels to align with the agent logic.

Visual Reference (How it should look):

Data Structure: The structure must strictly follow the `canais.json` file.

Example of expected structure:

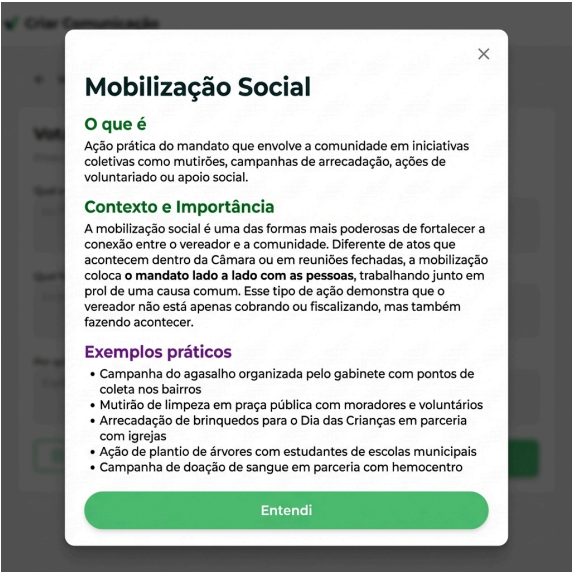

```
"Instagram": {  
  "formatos": [  
    "Reels",  
    "Stories",  
    "Card/Foto",  
    "Carrossel"  
  ]  
}
```

2.2. Explanation Modal in "Ato de Mandato"

Objective: Add an explanatory modal on the **Ato de Mandato** form screen to assist the user. The modal must have an access button and contain the following sections:

- **O que é**
- **Contexto e importância**
- **Exemplos práticos**

Visual Reference (Layout Suggestion):

2.3. Update of Mandate Act Forms

Objective: Update forms and placeholders for full compliance with the atos_de_mandato.json file.

Implementation Details: The JSON file contains the "source of truth" for each type of act (Mobilização, Reunião, etc.):

- 1. **Modal Texts:** Use data from the explicacao key (definicao , contexto_e_importancia , exemplos_praticos).
- 2. **Form Fields:** Use the list in perguntas to generate inputs.

Note: Ensure all application forms are synchronized with this JSON.
